01 Getting around

The sidebar is grouped the way the day runs: what you do, what you keep, what you check.

Three groups in the sidebar. **Transactions** is the counter work — billing, buying, money in, orders. **Masters** is the things that stay: items, tags, customers, suppliers. **Reports** is where you find out how it went.

The screens you use every hour have a function key. They work from anywhere in the app.

KEY	SCREEN	KEY	SCREEN
F2	Sales Invoice	F7	Tag & Barcode
F3	Purchase	F8	Customers
F4	Receipts	F9	Refining
F5	Orders	Ctrl K	Search or jump to anything
F6	Item Creation	—	

Ctrl **K** is the fastest way to move. Start typing a screen name or a customer's name and press Enter — it jumps straight there.

02 Sales invoice

Press **F2**. One screen from customer to printed bill.

TAG	ITEM	QTY	GROSS WT	PURITY	STONE WT	STONE RATE	NET WT	RATE/10GM	MKG %	MKG AMT	AMOUNT	LINE TOTAL
scan	Gold Necklace		24.500	91.6			24.5	115000	12	33,810.00	2,81,750.00	3,15,560.00
scan	Item name...						0					

Bill Summary	
Goods Amount	2,81,750.00
CGST @ 1.5%	4,733.40
SGST @ 1.5%	4,733.40

FIG 2.1 A bill in progress. The red chip under the customer shows what they already owed before this bill — click **View khata** to see why.

Filling the bill

- 1 Type the customer's name and pick them from the list. Not on file? Press the **+** beside the box and add them without leaving the bill.
- 2 Scan the tag in the **Tag** column, or type the item name. A scanned tag fills weight, purity, stone and making by itself.
- 3 Type **Rate/10Gm** — the counter figure. 1,15,000 means one lakh fifteen thousand for ten grams.
- 4 Type **Mkg %** — making as a percentage of the metal value.
- 5 Take old gold under **Old Gold Received (URD)** if there is any.
- 6 Enter **Amount Received** and the **Payment Mode**, then **Save & Print**.

How the line is priced

$\text{Amount} = \text{Net Wt} \times (\text{Rate}/10\text{Gm} \div 10)$

$\text{Mkg Amt} = \text{Amount} \times \text{Mkg \%} \div 100$

$\text{Line Total} = \text{Amount} + \text{Stone Amt} + \text{Mkg Amt} + \text{Hallmark}$

Fig 2.1: $24.5 \text{ g} \times 11,500 = ₹2,81,750$ · making 12% = ₹33,810 · line total ₹3,15,560.

Purity does not divide the rate on a sales bill. You quote the rate *for that purity* — a 22K rate against 22K weight. The purity column is there so the fine weight reaches the gold khata and the stock report, not to reduce the amount. Purity *does* price the line on a purchase bill, which is the opposite way round; see section 05.

Making charges — three ways

The bill takes whichever you give it, in this order:

COLUMN	CHARGES	WINS OVER
Mkg Amt	A flat rupee figure typed on the line	Everything
Mkg %	A percentage of the metal value	The tag's per-gram rate
(tag)	The per-gram making set when the piece was tagged	Used only if the other two are blank

Leaving **Mkg %** blank does **not** mean zero making — it falls back to the per-gram figure on the tag. To charge nothing for making, type 0 into **Mkg Amt**.

GST

Set **GST %** to 3 and the summary splits it the way the bill prints it: **CGST 1.5%** and **SGST 1.5%**, never one 3% line. Tick **GST not required** for a bill that carries none.

Discounts and the rest

Bill Discount (₹)	Off the whole bill, before tax.
Making Discount (₹)	Off the making only. Can be given in rupees and as a percentage together; the two add up but never exceed the making charged.
Making Discount (%)	The same waiver quoted as a percentage of the making.
Redeem Points	Loyalty points spent as a discount, capped at the customer's balance.
Other Charges (₹)	Added after tax.
Saving Scheme	Scheme money is a deposit you already hold, so it comes off <i>after</i> GST — unlike a discount.
Weight-wise bill	Settles the metal in grams instead of rupees. A Balance Weight panel appears; stones are still paid in cash.

03 Reverse calculation

The customer names a figure. The bill works backwards to it.

"Make it ₹3,50,000." The weight is on the scale and the rate is today's rate — neither can move. The only thing left to adjust is the making, so that is what the app solves for.

WhatsApp PDF Save Save & Print

FIG 3.1 Asked for ₹3,50,000; the making came out at 20.61% and the bill landed on ₹3,49,999.99.

- 1 Fill the item lines as usual — weight, purity and **Rate/10Gm**. Leave the making alone.
- 2 Scroll to **Payment & Adjustments** and type the figure into **Bill Should Come To (₹)**.
- 3 Press **Fit Making**.

The making percentage is written onto every line, and a green line tells you what it did: "Making set to 20.61% — the bill comes to ₹3,49,999.99." GST, hallmark and stones are all included in the figure it aims at.

Why it can land a paisa off. The making on each line is rounded to the paisa before 3% tax is applied, so the reachable totals step in jumps of about one paisa. Some round figures fall between two steps. The app always tells you the figure it actually reached rather than claiming the one you asked for.

If the figure is too low — below what the metal, stones and tax already come to — nothing is changed and you are told why: "Metal, stones and tax alone come to ₹X. ₹Y cannot be reached by making charges — lower the rate or give a discount."

The fitted percentage carries six decimals in the Mkg % column, not two. On a lakh-rupee bill a tidily rounded 20.61% misses the target by around twenty paise, and hitting the figure was the whole point. The tidy number is what the green line shows you.

04 Split payment

Half UPI, half cash — booked as two, not as one.

The screenshot shows the 'Sales Invoice' form in the Parivar Jewellery ERP system. The 'Amount Received (₹)' is 349999.99, and the 'Payment Mode' is 'Cash'. The 'Split this payment across modes' checkbox is checked. The table below shows the split:

MODE	AMOUNT	REFERENCE
Cash	199999.99	UPI ref / cheque no.
UPI	150000	4471 2290 5512

The 'Bill Summary' on the right shows the total bill amount of ₹3,49,999.99, with a balance due of ₹0.00. The 'Fit Making' button is visible.

FIG 4.1 Two legs that foot to the amount received. The line on the right confirms they agree before you can save.

- 1 Enter the full **Amount Received** first.
- 2 Tick **Split this payment across modes**.
- 3 Set the mode and amount for the first leg. Press **Add a mode** for the next.
- 4 Put the UPI reference or cheque number in **Reference**.

Each leg reaches its own account — cash to the cash drawer, everything else to the bank — so the Day Book and the Cash Book both come out right. The **Payment Mode** box locks and follows the largest leg, which is what the bill prints.

The legs must add up to the amount received. If they do not, the line under the table says how much you are over or short and the bill will not save. That is deliberate — a split that does not foot leaves the drawer wrong.

If a card leg is present, the swipe fee is charged on that leg alone, not on the whole bill.

05 Purchase

Press **F3**. Metal in from the supplier, with wastage and fine weight.

Adjustments

Summary

Cancel Save Purchase

GST @ 3% 5,505.15

From the Material Out lines

FIG 5.1 15.68 g at 76 touch with 3% wastage, bought at ₹1,47,400 per ten grams.

Fine weight and wastage

Wastage is added **to the touch**, not levied on the fine weight. A 76 touch with 3% wastage is settled as 79.

$$\text{Fine} + \text{Wst} = \text{Net Wt} \times (\text{Purity} + \text{Wastage}\%) \div 100$$

$$15.68 \times (76 + 3) \div 100 = 12.387 \text{ g}$$

The amount — the 995 basis

Gold is quoted against 99.5 purity, so the rate is divided by 99.5 to get the price of one purity point, then multiplied by the weight and the settled touch. Silver and platinum divide by 100 instead.

Rate/gm = Rate typed ÷ 10

Amount = Rate/gm ÷ 99.5 × Net Wt × (Purity + Wastage%)

1,47,400 ÷ 10 = 14,740 · 14,740 ÷ 99.5 × 15.68 × 79 = ₹1,83,504.85

Rate is typed per ten grams, the same as on the sales bill. Everything stored, printed and reported stays per gram.

A supplier who is not on file yet

FIG 5.2 The + beside the supplier box. Name, mobile, city, GSTIN — saved and picked into the invoice in one step.

Press + next to **Supplier** rather than abandoning a half-typed invoice for the Masters screen. The same button sits beside **Customer** on the sales bill.

Material In and Material Out

The two tabs above the grid are for a metal exchange. **Material In** is goods received; **Material Out** is metal handed back, which is deducted from the bill. When both carry lines, a *Metal exchange* badge appears and the strip below the grid shows gross, net and fine each way, with the **Balance Fine** between them.

06 Khata

Ledger / Khata. One party's account, in rupees or in fine grams.

Type the party's name in the box at the top left. Three views sit beside it:

DR - WHAT THEY OWE

Bills raised, metal given out. A customer who has taken goods sits on this side.

CR - WHAT THEY PAID

Money received, metal returned. A supplier you have not yet paid sits on this side.

VIEW	SHOWS
Money	The classic two-sided rupee khata, with <i>To Balance b/d</i> at the foot.
Metal	The same, in fine grams. Dr is metal you gave them; Cr is metal they gave you. Pick Gold, Silver or Platinum.
Money + Metal	Both on one running statement — <i>Account cum Stock</i> .

Account cum Stock — money and metal on one statement

₹4,18,515.06 Dr

34.220 g Dr

DATE	DOC NO	TRANSACTION	FINE WT	IN/OUT	AMOUNT	RECEIVED	BALANCE ₹	BALANCE G
Opening Balance							9,500.00 Dr	5.000 Dr
11/Jun/2026	COM1	Sales Account	22.442	OUT	3,13,465.05		3,22,965.05 Dr	27.442 Dr
05/Aug/2026	COM5	Sales Account	6.778	OUT	95,550.01		4,18,515.06 Dr	34.220 Dr
Closing Balance					4,09,015.06	0.00	4,18,515.06 Dr	34.220 Dr

FIG 6.1 Money + Metal. Two closing balances at the top right — ₹4,18,515.06 Dr and 34.220 g Dr — and both run down the last two columns.

Balances are never shown as negative numbers. A figure is printed as a magnitude followed by **Dr** or **Cr**, the way a written khata reads. Anything below half a paisa prints as a dash.

Leave the *from* date empty to see the account from the beginning. **Export** writes the whole statement to CSV.

Metal owed is settled, not converted

To turn grams owed into a money balance, use **Receipts** → **Metal Settlement**. Pick the party and the metal and the app fills in the direction and the weight from their balance; you supply the rate. Outstanding never converts metal to rupees on its own — the value would change with the rate every day.

07 Accounting books

Trial Balance, Profit & Loss, Balance Sheet — opening on the current financial year.

All three open on 1 April to today, and the **This FY** button puts them back there. Nothing here is typed or stored: every figure is worked out from the bills, purchases and vouchers each time you open it, so it cannot go stale.

Profit & Loss — is the year making money?

FIG 7.1 Gross profit of ₹1,84,138.42, and net profit of ₹99,638.42 after ₹84,500 of shop expenses.

Gross Profit = Sales + Closing Stock - Purchases

Net Profit = Gross Profit - Indirect Expenses

The **Trading Account** is the metal side of the business. The **Profit & Loss Account** below it takes rent, electricity, salaries and the rest off the gross profit and leaves what the shop actually earned. The two tiles at the foot repeat both figures.

Trial Balance

FIG 7.2 Every head, Dr against Cr. The two totals must agree.

If the two columns do not agree, an opening difference is shown as its own line rather than hidden — you can see it and fix it.

Balance Sheet

FIG 7.3 What the shop owes on the left, what it owns on the right.

Capital is struck so the two sides agree and carries the period's net profit. Stock is valued at cost from the pieces actually in the trays.

08 Profit per piece

MIS & Scheme Reports. What each piece cost, and what it fetched.

The Profit & Loss tells you whether the year made money. This tells you *which pieces* made it.

FIG 8.1 One row per sold piece, sorted by profit. The date range and **This FY** / **Last FY** buttons sit under the report picker.

Choose **Item-wise Profit** from the dropdown. Every sold piece gets a row: what it cost per fine gram, what it cost in total, what it sold for, the profit, the margin and how many days it sat in the tray before it moved.

Purity Profit is the same figures rolled up by touch.

A piece sold with no Cost/Gm recorded is left out entirely — not counted as pure profit. The *Excluded from Margin* tile shows how many. If that number is not zero, this report is understating. Fill the cost in on the **Stock Report** using **Edit Stock**, and the pieces join the margin.

Why this figure differs from the Profit & Loss

They answer different questions and will not match. Neither is wrong.

	ITEM-WISE PROFIT	PROFIT & LOSS
Counts	Sold pieces that have a cost recorded	Everything the shop did
Cost from	The Cost/Gm on each tag	Purchases and closing stock
Expenses	Not deducted	Deducted
Use it to	See which lines and which purity earn	See what the business earned

Take the Profit & Loss as the answer to "did we make money". Take Item-wise Profit as the answer to "on what".

09 The daily reports

The four you will open most.

Day Book

FIG 9.1 The day at a glance — what was billed and what came in, mode by mode.

Outstanding

FIG 9.2 Debtors on the left, creditors on the right. Switch to **Metal (g)** for grams owed instead of rupees.

Stock Report

FIG 9.3 Every piece in the tray. **Edit Stock** corrects gross, stone, purity, **Cost/Gm**, location and HUID after a count — net and fine weight are recalculated for you.

Group it by item, group, location, category, salesman or shelf from the dropdown. A red banner at the top warns when something is below its reorder level.

GST Reports

FIG 9.4 Five tabs — GSTR-1, GSTR-2, GSTR-3B, HSN Summary and TCS/TDS. Each bill carries its own CGST, SGST and IGST columns, tagged B2B or B2C.

A bill to a customer in your own state is reported as CGST + SGST; a bill to another state is reported as IGST. The split is decided by the place of supply against the shop's own state, so keep the state right on the customer record.

Cash Book & Registers holds the Cash and Bank books, the Journal, and the four sales and purchase registers. Every report on every screen has **Print** and **Export** — CSV, Excel or Word.

10 Worth knowing

The handful of things that surprise people.

Blank Mkg %	Falls back to the making rate on the tag, not to zero. Type 0 in Mkg Amt to charge nothing.
Purity on a sale	Does not reduce the amount. It carries the fine weight to the khata and the stock report. On a <i>purchase</i> it does price the line.
Uncosted pieces	Sold without a Cost/Gm, they are excluded from every margin figure rather than counted as free. Watch the <i>Excluded from Margin</i> tile.
Out-of-state bills	GST Reports treats them correctly as IGST. The Bill Summary and the printed bill still show the CGST/SGST halves — use the GST report for filing.
Deleting a bill	Puts the tags back in stock and reverses every posting. Nothing is left behind — but the bill number is used up.
Rates per ten grams	Sales and purchase both take the counter figure. The thermal slip still prints the per-gram rate, because it shows net × rate in full.
Everything is offline	The books live on this machine. Take backups from Settings .

Written against **Parivar Jewellery ERP 1.24.0**. Every screenshot in this manual was captured from the running application on demonstration data, so the figures are consistent but the names and amounts are invented. Formulas quoted here are the ones the software actually applies.
